

For this assignment, I was simply adding to last weeks assignment. I used generative ai to come up with the particle system and health bars, and then it was easy to integrate them from there. I have found that using ai can be incredibly helpful in coding, because if I have any misunderstandings, or if my code doesn't run properly, ai can usually help me and do it much faster than I could on my own. This assignment was pretty fun, and I really like how my game is coming along!
