

For this assignment, I struggled to figure out how to import the p5 play library, so I used the AI to help me with that which was helpful. I otherwise mainly kept my game the same from last week's assignment, which I also used AI to write some lines.. I didn't directly use anyone else's code however. I find the AI to be quite helpful whenever I get confused, as it is usually is able to provide me with a helpful solution as long as I can structure my questions or issues correctly.
